GentleVanguard

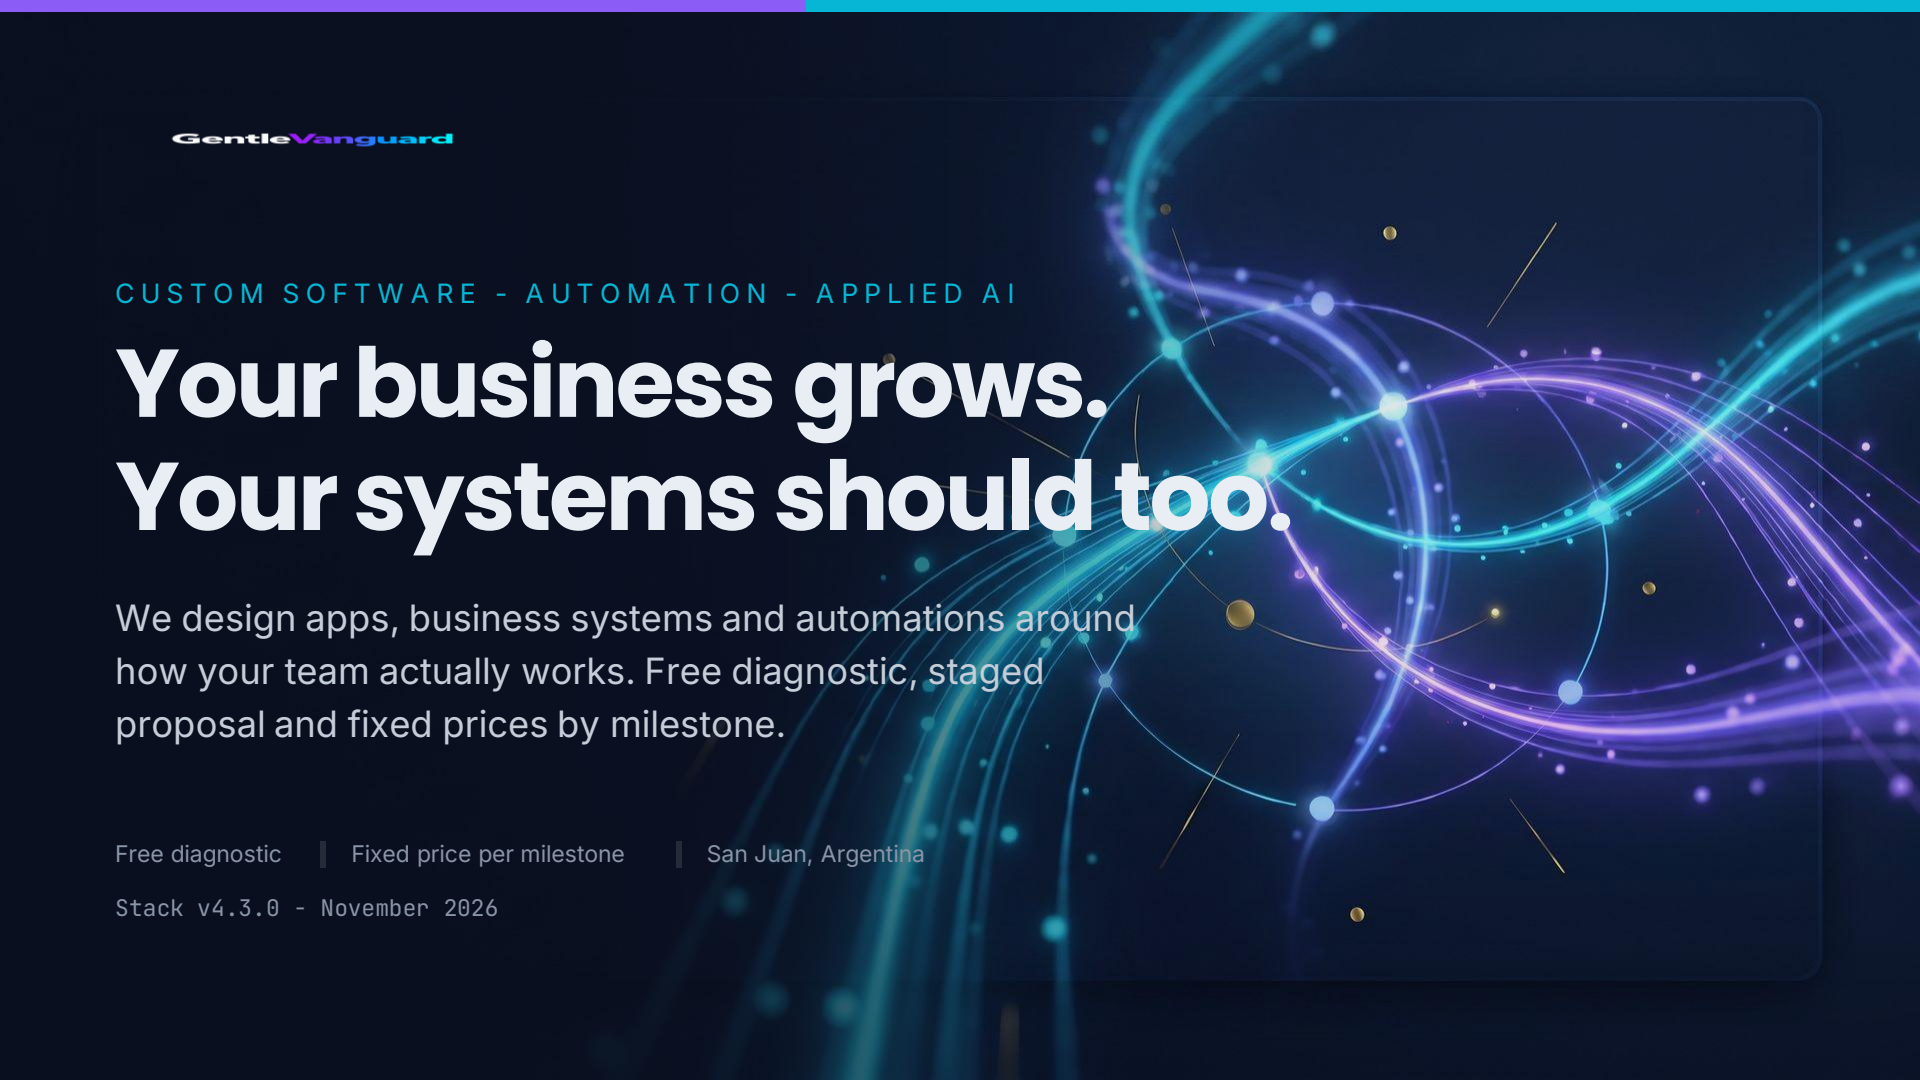

CUSTOM SOFTWARE - AUTOMATION - APPLIED AI

Your business grows. Your systems should too.

We design apps, business systems and automations around how your team actually works. Free diagnostic, staged proposal and fixed prices by milestone.

Free diagnostic | Fixed price per milestone | San Juan, Argentina

Stack v4.3.0 - November 2026

WHO WE ARE

A software studio that listens before it builds

GentleVanguard designs and builds custom apps and business systems for small and mid-sized companies that need to order their processes, automate operations and grow on dependable software. We work project by project, as an independent contractor, from San Juan, Argentina.

15+

Years of practice

Software architecture and applied AI inside companies

3

Service lines

Custom software, automation and applied AI

1

Accountable owner

The same person designs, builds and delivers

WHAT WE DO

Three ways to bring an operation back in order

Every project starts from the real process, not from a tool.

Custom software

Apps and portals built around your processes, not the other way around. Customer management, operations and tracking. Evolution of systems that no longer scale.

Automation

Integrations across systems, CRM and payments. Conversational service flows. Dashboards and reports so tracking stops depending on spreadsheets.

Applied AI

We assess where artificial intelligence actually pays off: assistants connected to your own information, with clear limits and human review.

HOW WE WORK

A short method, with the criteria agreed before we start

We understand first

We talk about the problem, the people involved and the tools you already use. Nothing is designed on assumptions.

Then we build

We agree on priorities, stages, deliverables and acceptance criteria. The first version is tested and reviewed with evidence.

We stay with it

Go-live, documentation, training and an agreed path for evolution. Delivery is the start of the operation, not its end.

A project does not start with a proposal. It starts with a diagnostic that ends in a process map, the main pain points, automation opportunities and a staged roadmap.

THE DIFFERENCE

We do not sell hours: we operate on a platform we already built

GentleVanguard is a studio with its own stack. That platform is what holds up delivery times, quality and traceability on every project.

28

Own apps

Systems we developed and that run today

21

AI agents

Roles with model, permissions and budget assigned

250

Skills

Reusable capabilities that are not rewritten per project

154

Automated checks

Health checks watching 29 stack components

A layered stack, not a one-off project

Each layer solves one class of problems and keeps a record of what it did.

Layers
Surfaces, orchestration, agents, skills, knowledge, tools and infrastructure.

Traceability
Sessions, traces, events and hash-chained audit in the local database.

Governance
30 quality gates, secret scanning and fail-closed policies.

Local first
Runs on your team machine and is exposed to the cloud when needed.

Tools	CLI, IDEs and product surfaces
Agents	Specialized profiles per runtime
Orchestration	Context, routing and steps
Knowledge	Engram, CodeGraph and Graphify
Operational data	Nexus / SQLite, kept separate
Quality & delivery	Gates, review and evidence

THE PATH

From the first conversation to a running operation

Stages with verifiable deliverables, not open-ended phases.

01 02 03 04

Understand

We map the process, the roles and the tools in use today.

Define

Scope, stages, deliverables and acceptance criteria are agreed.

Build

A first useful version, tested and reviewed with its real users.

Operate

Go-live, documentation, training and evolution.

SCOPE

What can be contracted, and in which order

Reference price list in US dollars, net of taxes. Refreshed before every quote.

Service	Reference range (USD)	When it makes sense
Analysis and proposal	200 - 400	You are not sure what to build. Deducted in full when you sign.
Landing page / Corporate site	350 - 700 / 900 - 1,800	You need your own presence and a simple way to receive enquiries.
Web app with integrations	3,500 - 8,000	The process already lives across several tools that need connecting.
Mobile app MVP	3,000 - 6,000	The team needs to operate away from a desk.
WhatsApp bot simple / hybrid with AI	1,500 - 2,500 / 3,500 - 5,000	There is repetitive service work that can be automated.
AI agent with RAG	4,000 - 8,000	Queries need to answer from your own documentation.
Custom CRM	5,000 - 15,000	Commercial tracking is scattered.
Maintenance and support	90 - 250 per month	A system already exists and needs sustaining and evolving.

A studio with its own stack, versus an isolated build

Two paths that often look equivalent and are not.

GentleVanguard

A studio that operates on its own platform

- Fixed prices per milestone and bounded scope before we start.
- Documented diagnostic: process map, risks and staged roadmap.
- Code, documentation and delivery criteria under one quality bar.
- Capabilities reused across projects: what was solved is not paid for twice.
- Continuity after delivery: support, improvements and new integrations.
- Own training: GV Academy so your team adopts the system.

Isolated build

The project starts and ends with the project

- Vague scope adjusted on the fly, with cost as the variable.
- Software handed over with no documented process and no transferred operation.
- Every project re-solves the same base problems.
- No knowledge transfer: the system depends on a single person.
- No agreed continuity: the system ages with no path forward.
- No training: adoption stays in the provider hands.

BEYOND THE PROJECT

GV Academy: the knowledge stays with your team

A live, open catalogue: 92 products across applied AI, software and business practice.

30

Courses

With 429 hours of video content

34

Ebooks

371 chapters, 18 of them premium

28

Toolkits

Prompts and flows ready to apply

92

Products

Published and sold individually

This is already running: 28 of our own developments

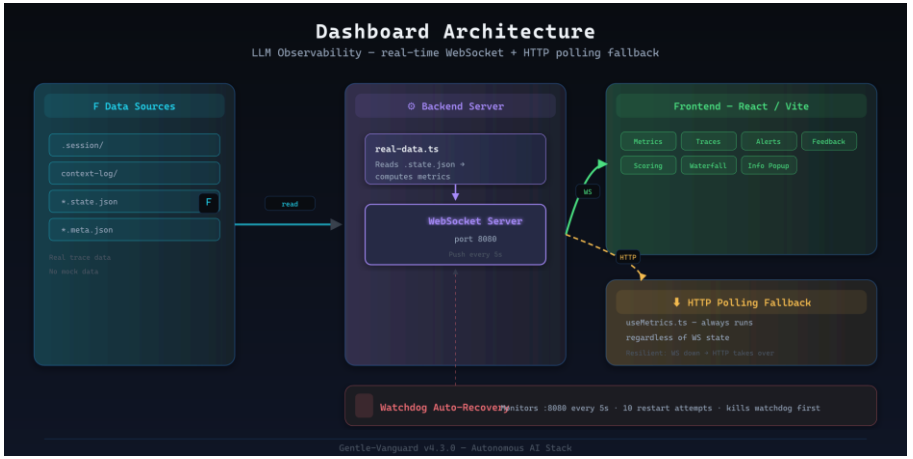

These are not catalogue products or client case studies. They are systems we built and that run today.

GV Academy
Learning platform, portal, CRM and a catalogue of 92 products.

WhatsApp bot
Deterministic conversational service, running in production.

Observability
Dashboard with live metrics, traces, alerts and feedback.

Command center
App lifecycle: start, status and logs.

Stack observability dashboard, fed by real traces

THE FIRST STEP

The first consultation is free of charge

We meet, we understand your operation, and you walk away with a clear analysis plus a staged proposal with fixed milestone pricing. Then you decide whether we move forward. If we do not, the diagnostic is still yours.

Free

Initial diagnostic

Includes process map and staged roadmap

50/40/10

Payment milestones

Fixed price per milestone, paid in advance

30 days

Warranty

Product warranty at delivery sign-off

GentleVanguard

Let us start by understanding your operation

One diagnostic conversation is enough to know whether there is a project here and what it is worth. No commitment.

I want my free diagnostic
